6.172 Project 1 Team Contract

Robert DeLaus & Yianni Giannaris

In order to ensure the best team experience while working on this project we have both agreed to abide by the following norms and standards:

Meeting and communication norms:
- We will meet at least once per day, and at the beginning of each meeting we will agree on how long the meeting should last and what we must accomplish during the meeting. We both have almost identical schedules, so we don't foresee any issues setting up times to work. Because we both live in the same house, our meetings will generally take place back at the house.
- We will communicate over text message and phone calls throughout the project
- While unlikely, if one of us were to drop the class during the project, we agree to both continue working on the project until completion.

Work norms:
- We will divide all of the work equally between the two of us and will make sure that we are each making a comparable number of commits to the repository. We will each work on both the testing and implementation portions of the project. It is very important to us that we each have a complete understanding of the entire project, including code written by the other partner.
- While we may not pair program the test cases, we plan on pair programming the implementation.
- If one of us were to get sick or have some other emergency that prevents that person from working, we agree to stay in constant contact to manage the situation.

Decision making:
- All major decisions must be agreed upon by both of us. In the event of a disagreement on optimization ideas, we will each explain our perspectives and remain open minded to the other partner's ideas.
- It is not acceptable for one team member to do more or less work than the other.

Team member signatures:
